Profile

I have 8 years of experience writing web apps that span consumer productivity software to mission-critical financial trading platforms.

I have worked in full stack engineering for my entire developing career and my commitment to critical thinking and attention to detail have gotten me to where the senior frontend developer in Inmetrics and Quarashi, Ticket kindom company.

I am a self-motivated, energetic collaborator who thrives on working in a fast-paced environment with tight deadlines and have a desire to stay updated on current and new technologies.

So I have engaged as a role of full stack developer in this company, contributing to make innovative result and better progress.

I have keen insight into what it takes to run a successful project because I have taken part in different successful projects across from startup to multi vendors.

My career goal is to have an opportunity to learn and grow my skills from a technical standpoint, and a chance to learn more skills over time.

I`d love to work for the company innovative and ready to expand.

Senior Full-Stack Developer at TPC Logistica, Francisco Mrazan, Honduras

FEBRUARY 2019 — DECEMBER 2020

This is IT company named Technologie People Connection.

I worked as Python and AWS developer. This is one example that project's requirement of them which I worked at once.

- Host Quick, Draw! database on Google Cloud Platform
- Provide installation manual and use guide for Google Cloud database
- Create API for inquiries to the self-hosted database -Implement google Quick Draw pattern on current project.
- Restful API receives POST JSON data and returns JSON response
- Restful API must point to database hosted on google cloud (quick draw database copy)
- It is expected to send 1500 requests per minute and must interact with the database that has an approximate weight of 241.63 GB
- The database must be the one offered by the Quick Draw game, it must be installed in your own hosting account in google cloud.

- Tech stacks

Our services range from generation QR code for efficient payment method, tracing transaction histories in any specific time length, Redeeming coupons codes for customers to generate more sales and building sub accounts for employees to receive tips for their services.

- Tech stacks

React Native/Redux/Styled components/Firebase

Education

University of Novi Sad, Novi Sad, Serbia

SEPTEMBER 2012 — MARCH 2016

My biggest passion is learning about software and technology. I was fascinated with computers from a young age, so I decided to study Computer Science in university and I've continued in that direction since graduating. It's been a great choice for me! As a full stack software developer, I get to shape how the internet is progressing and how websites are evolving, and that's exciting to me.
